

# Electronic Marker for USB Type-C Cable

## 1 FEATURES

- Passed USB-IF PD3.1 certification. TID number: 10394, XID number:0012380
- Support USB Type-C 2.2 and USB PD3.1
  - ✧ Support SOP' and SOP" communication
  - ✧ Adaptive engine of BMC receiver
  - ✧ Embedded PHY
  - ✧ Support Get\_Manufacturer\_Info
  - ✧ Support Modal Operation
  - ✧ Support Get\_Status, integrated internal temperature sensor for real-time acquisition of cable temperature
  - ✧ Support EPR 240W Capable
- Support Thunderbolt 3 , Thunderbolt 4 Data Communication and USB 4.0 80G cable application
- High level of integration
  - ✧ Integrated VCONN diodes at both ends
  - ✧ Integrated Ra at both ends and Ra automatic removal
- Extremely low BOM cost
  - ✧ Low BOM cost
- Flexible customization
  - ✧ Support programming protection, convenient to lock data after customization
- Extremely low power consumption
- Power supply: 2.7V~5.8V
- ESD 8KV (VCONN1/2、CC pin)
- 55 V High Voltage Tolerance on CC, VCONN1 and VCONN2 Pins VCONN/CC pins high withstand voltage 55V
- Package
  - ✧ DFN2x2-6L
  - ✧ DFN2x2-8L
  - ✧ WL-CSP-6B

## 2 APPLICATIONS

- USB Type-C Passive cable
- USB Type-C Active cable
- USB Type-C EPR 240W Capable cable
- USB Type-C Thunderbolt 3 , Thunderbolt 4 cable

## 3 DESCRIPTION

IP2133H is an electronic marker for USB Type-C cable which supports USB Type-C 2.2 and USB PD3.1. It provides a complete solution for C-C cable applications.

Support data programming, convenient to develop. Supports programming protection to ensure data security

IP2133H has a high level of integration and an extremely simplified BOM, which effectively reduces the size of the overall solution and reduces the BOM cost.

## 12 Function Description

### 12.1 SOP' and SOP" communication

SOP' Communication is recognized by electronics in one Cable Plug, SOP" Communication can also be supported when SOP' Communication is also supported. IP2133H supports SOP' and SOP" communication. When no Contract or an Implicit Contract is in place (e.g., after a Power Role Swap or Fast Role Swap), only the Source port that is supplying VCONN is allowed to send packets to a Cable Plug (SOP') and is allowed to respond to packets from the Cable Plug (SOP') with a GoodCRC in order to discover the Cable Plug's characteristics. When an Explicit Contract is in place the VCONN Source (either the DFP or the UFP) can communicate with the Cable Plug(s) using SOP'/SOP" Packets. During this phase, all communication with the Cable Plug is initiated and controlled by the VCONN Source which acts to prevent conflicts between SOP" Packets. The communication process is shown in the figure below:

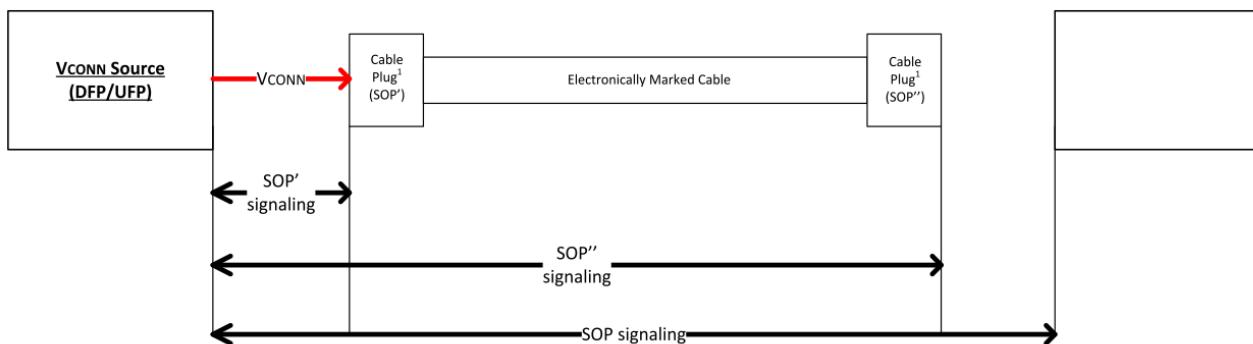

Figure 6 Example SOP' Communication between VCONN Source and Cable Plug(s)

## 12.2 PD Protocol and Message Supported

IP2133H will detect and respond to the received packets with below three ordered sets, Hard Reset, Cable Reset and SOP\*. Their ordered sets are defined in the following table.

K-code Number	K-Code in code table		
	Layout Pad Reference	Layout Pad Reference	Layout Pad Reference
1	RST-1	RST-1	Sync-1
2	RST-1	Sync-1	Sync-1
3	RST-1	RST-1	Sync-3
4	RST-2	Sync-3	Sync-3

### 12.2.1 Hard Reset and Cable Reset

IP2133H will monitor for Hard Reset and Cable Reset signaling and reset when either of them is detected. IP2133H will perform the equivalent of a power cycle and return its power-up state.

### 12.2.2 Control Message

This chip will respond to the following control messages required for passive USB Type-C cable. Any messages except those in the table will be ignored by no action after returning the GoodCRC message.

	Message Header[4:0]	Message Type	Description
Transmitted Message	0 0001	GoodCRC	Be sent to acknowledge that the previous message was correctly received (i.e. had a good CRC)
	0 0011	Accept	Be sent to indicate that it has completed its Soft Reset.
Received Message	0 0001	GoodCRC	The sent message has been correctly received
	0 1101	Soft_Reset	Reset MessageIDCounter before sending the Accept Message response
	Others	N/A	Ignored

### 12.2.3 Data Message

This chip will respond to the following data messages required for passive USB Type-C cable. Any messages except those in the table will be ignored.

	<b>Message Header[4:0]</b>	<b>Message Type</b>	<b>Description</b>
Transmitted Message			N/A
Received Message	0 0011	BIST	Including BIST Carrier Mode and BIST Test Data
	0 1111	Vendor_Defined	See below section
	Others	N/A	Ignored

### 12.2.4 Discover Identity

- Discover Identity

Discover Identity command is used to identify the VCONN Source power cable plug, the command format is as follows:

- ID Header

The ID Header VDO contains information corresponding to the Power Delivery Product. The fields in the ID Header VDO shall be as defined in Table.

Bit(s)	Description
B31	USB Communications Capable as USB Host: <ul style="list-style-type: none"><li>• <i>Shall</i> be set to one if the product is capable of enumerating USB Devices.</li><li>• <i>Shall</i> be set to zero otherwise</li></ul>

B22...16	<b>Reserved.</b> <i>Shall</i> be set to zero.
B15...0	16-bit unsigned integer. USB Vendor ID

- Cert Stat VDO

The Cert Stat VDO shall contain the XID assigned by USB-IF to the product before certification in binary format. The fields in the Cert Stat VDO shall be as defined in Table:

Bit(s)	Description	Reference
B31...0	32-bit unsigned integer, XID	Assigned by USB-IF

- Product VDO

The Product VDO contains identity information relating to the product. The fields in the Product VDO Shall be as defined in Table.

Bit(s)	Description	Reference
B31...16	16-bit unsigned integer. USB Product ID	[USB 2.0]/[USB 3.2]
B15...0	16-bit unsigned integer. bcdDevice	[USB 2.0]/[USB 3.2]

- Passive Cable VDO

A Passive Cable has a USB Plug on each end at least one of which is a Cable Plug supporting SOP Communication. A Passive Cable Shall Not incorporate data bus signal conditioning circuits and hence has no concept of Super Speed Directionality. A Passive Cable Shall include a VBUS wire and Shall only

respond to SOP' Communication. Passive Cables Shall support the Structured VDM Discover Identity Command and Shall return the Passive Cable VDO in a Discover Identity Command ACK as shown in Table.

### 12.2.5 Get\_Status

The Get\_Status Message is sent by a Port using SOP to request the Port Partner's present status. The Port Partner Shall respond by returning a Status Message. A Port that receives an Alert Message indicates that the Source or Sink's Status has changed and Should be re-read using a Get\_Status Message.

The Get\_Status Message May also be sent to an Active Cable to get its present status using SOP'/SOP". The Active Cable Shall respond by returning a Status Message.

A Status Message, sent in response to a Get\_Status Message to SOP' or SOP", enables a Source or Sink to get the present status of the Cable's Cable Plug(s). Typically, a Get\_Status Message will be used by the USB Host and/or USB Device to manage the Cable's Cable Plug(s) temperature. The Status Message returns a 2-byte Status Data Block (SDB) whose format Shall be as shown in the following table. SOP'/SOP" Status Message:

Extended Header Data Size = 2	SDB (2-byte block)
----------------------------------	-----------------------

SOP'/SOP" Status Data Block:

Offset (Byte)	Field	Value	Description

### 12.3 Mode Operation

IP2133H supports mode operation and supports Mode Enter/Exit commands. IP2133H can support 4Gbps mode operation and 3 SVID mode operations. It can be applied to Thunderbolt 3, Thunderbolt 4 cable and DP cable. And it is convenient for customers to customize flexibly.

## 13 Application Schematic

### 13.1 USB 2.0 Cable Application Schematic

IP2133H support USB Type-C 2.1 protocol. It also supports low BOM cost. No capacitor is needed between VBUS and GND. It can save PCB Layout space.

### 13.2 USB3.2 Cable Application Schematic

When IP2133H is used as a USB 3.2 cable, a 10nF capacitor needs to be connected between VBUS and GND, and the capacitor withstand voltage is above 63V.

### 13.3 USB4.0 Cable Application Schematic

When IP2133H is used as a USB 4.0 cable, a 10nF capacitor needs to be connected between VBUS and GND, and the capacitor withstand voltage is above 63V.

## 16 IMPORTANT NOTICE

INJOINIC TECHNOLOGY Corp. and its subsidiaries reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to INJOINIC TECHNOLOGY Corp.'s terms and conditions of sale supplied at the time of order acknowledgment.

INJOINIC TECHNOLOGY Corp. assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using INJOINIC's components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of INJOINIC's components in its applications, notwithstanding any applications-related information or support that may be provided by INJOINIC. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify INJOINIC TECHNOLOGY and its representatives against any damages arising out of the use of any INJOINIC's components in safety-critical applications.

Reproduction of significant portions of INJOINIC's information in INJOINIC's data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. INJOINIC TECHNOLOGY Corp. is not responsible or liable for such altered documentation. Copying information from third parties may be subject to additional restrictions.

INJOINIC will update this document from time to time. The actual parameters of the product may vary due to different models or other items. This document is not a warranty of any kind, express or implied.

Resale of INJOINIC's components or services with statements different from or beyond the parameters stated by INJOINIC for that component or service voids all express and any implied warranties for the associated INJOINIC's component or service and is an unfair and deceptive business practice. INJOINIC TECHNOLOGY Corp. is not responsible or liable for any such statements.
